

## FLEXOTRONIC- The NEW Electronic Eartag

The new **FlexoTronic** – eartag is a completely new product line in the development of electronic eartags.

We have developed different models of the **FlexoTronic** – eartag: based on user requirements

There are 2 types of transponder:

- **30 mm Transponder**  
This is a special Caisley transponder which achieves a very high reading range.
- **27 mm Transponder**  
This is a special Caisley transponder and is very light.

Both types of transponder can be included into different models of eartags:

### 30 mm Transponder:

1. Round male part
2. Round female part
3. Female part as D-Model
4. Female part as G-Model

**FlexoTronic Male**  
**FlexoTronic R-30**  
**FlexoTronic D-30**  
**FlexoTronic G-30**

### 27 mm Transponder:

Round female part

**FlexoTronic R-27**

Female parts incorporating the transponder have the new **FlexoPlus** closing system.

There is the option of having the female part fitted with the **geno-system**.

You then have a green ring in together with the collecting tube for the removal of the tissue.

All types of Caisley transponder eartags can be combined with every type of MultiFlex counterpart.
