

# Volac range of Volac milk formulas

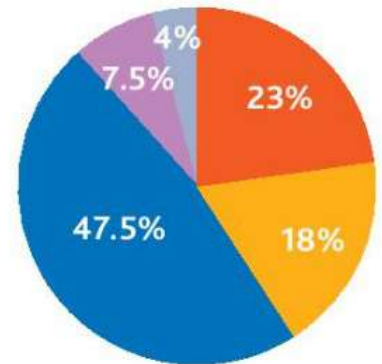

DESIGNED TO DRIVE 750G GROWTH PER DAY\*

**BLOSSOM**  
EASYMIX

The tried and trusted performer

- Tried and trusted performance
- Great results every time
- High **imunopro** content
- Gardion health package
- Higher levels of leucine

- P** Protein
- F** Fat
- S** Sugar
- Minerals
- Other\*\*

## Blossom EASYMIX mixing rate:

- Typically fed at a concentration similar to that of whole milk i.e. 12.5% dry matter. For high growth rates, it can be fed up to 15% dry matter.
- Fresh clean water should be available at all times from birth.
- Follow-on dry feed should be available from 3 days of age.

**GARDION**  
Benefits

- Enhances the function of the immune system
- Improves gut health

**BUTYRATE**

Benefits

- Drives gut blood flow and villi growth
- Promote water absorption
- Stimulate enzyme secretion

\*Based on recommended feeding rates with access to ad lib starter feed and water  
\*\*'Other' includes moisture, vitamins, residual carbohydrates and feed additives

## EASYMIX

### A LIFEGUARD<sup>®</sup> MILK FORMULA

Step 1:  
Add half the water  
to bucket

Step 2:  
Weigh powder

Step 3:  
Add powder to bucket  
and mix thoroughly

Step 4:  
Top up to required  
volume and mix thoroughly

Mixing Rate: 125 grams of powder mixed with water to make 1 litre of mixed milk.

TWICE DAILY FEEDING RATES (125g per litre of mixed milk)		
Age	am	pm
1 to 3 days	Colostrum: minimum 3 litres in first 6 hours, then give at least 2 litres/feed, twice a day	
4 to 7 days	2.5 litres	2.5 litres
8 to 35 days	3 litres	3 litres
36 to 49 days	2.5 litres	2.5 litres
50 to 56 days	2.5 litres	

BATCH MIXING PER FEED 1 x 20kg bag Blossom Easymix + 140 litres water = 160 litres of mixed milk			
No. calves	Blossom Easymix (kg)	Water (ltrs) (Approx)	Final mix (ltrs)
1	0.375	2.6	3
5	1.875	13	15
10	3.75	26	30
15	5.60	39.5	45

#### MANAGEMENT GUIDELINES

- All calves must receive at least 10% of birthweight (minimum 3 litres) of good quality colostrum within the first 6 hours of life (ideally within 2 hours).
- Fresh clean water should be available at all times from birth.
- Follow-on dry feed should be available from 3 days of age.
- Calves should have access to fresh clean straw at all times, preferably from racks.
- Calves should weigh at least double their birth weight and be eating a minimum of 1.5kg of dry feed per day for 3 consecutive days before weaning.
- Ensure all feeding equipment is thoroughly washed daily to prevent the build-up of biofilms.
- When using a new batch of milk replacer check the weight of a scoop of powder and / or recalibrate your machine to ensure that the correct concentration of milk is being fed.
- During periods of cold weather it is recommended to increase the amount of powder fed daily either by concentration or volume of milk. Aim to feed an additional 100g of milk solids per 10°C drop below thermoneutral temperature (10-20°C)

Volac Blossom Easymix is typically fed at a concentration similar to that of whole milk ie. 12.5% dry matter. For high growth rates, it can be fed up to 15% dry matter, always mix at the chosen concentration consistently. The table above gives recommended feed rates for average growth however the mixing rate and volume fed should be tailored to the individual system and targets.

Volac Blossom Easymix can be used in a once a day feeding system from 28 days of age providing calves are consuming enough solid feed to constitute a second feed. If feeding once a day offer a maximum of 3 litres per feed at 20% dry matter (i.e 600g powder/feed). For once a day feeding with whole milk add 50g of powder to 950ml of milk to make one litre. Calves under 28 days of age should be fed milk at least twice/day.

STORE IN A COOL DRY PLACE  
RE-CLOSE BAG TOP SECURELY AFTER USE
